## SLIM BALLASTS WITH SHAPES 26X28 MM AND 28X28 MM DUE TO BE PHASED OUT

PLACE YOUR FINAL ORDERS BY **31.12.2016**

Lighting technology has undergone rapid change

in the course of the last few years. Increasing numbers of applications are now dominated by LED, a development that has also affected our product range. As a result, VS can now offer you an extensive range of options in the field of LED. But this has also gone hand in hand with a decrease in demand for conventional technologies.

With regard to our slim ballast shapes 26x28 mm and 28x28 mm, demand has decreased to such an extent that we can no longer cover the cost of producing these models. Both models are therefore due to be phased out of our product range in March 2017.

Don't miss this chance to place your final order(s) for these electromagnetic ballasts. To this end, please let us know the numbers you require by the end of December 2016 at the very latest! Delivery will be effected by March 2017.

But you can also contact us for assistance in converting your luminaire ranges to alternative technologies, such as:

- PCBs and respective drivers for LEDs or
- electronic ballasts in slim-line casings.

We trust you will understand our reasons for this change to our product range. But the good news is that we will continue to produce standard models of magnetic ballasts as before.

Your VS representative will be happy to provide further information.
