

INVITATION TO THE LIGHT+BUILDING 2018

[Light+Building](#) bridges the gap between design and technology. The leading international trade fair not only focuses on technical innovations, but also on the latest design trends. As a result, one of the key topics of Light+Building 2018 is "Aesthetics and well-being in harmony".

We therefore proudly present LiNA, our new light control app. Our Blu2Light technology facilitates convenient and wireless lighting control from your tablet or smartphone.

A further highlight will be the LinkRay technology from our parent company, Panasonic. Using LED light to transfer digital information to mobile devices turns digital screens, advertising panels and light sources into tools for 1-to-1 marketing on smartphones.

NOTHING YET TO TAKE YOUR INTEREST?

Then how about taking a look at our other new LED-related products:

- Tuneable White modules,
- slim-line high-performance drivers and
- a new shop lighting system that enables luminaires to be miniaturised.

**Hall 4.0
Stand B50**

Visit us in hall 4.0, stand B50 and see for yourself – it's worth it!

Take us up on our cordial invitation to talk to our experts and experience intelligent lighting solutions for your company and your customers.

On request, we will gladly send you a personal online voucher for a day ticket.

We look forward to seeing you. Should you want to make a personal appointment in advance, please contact your VS representative.

Yours sincerely,
VS Sales Team
