

EASY 28 – SIMPLIFY YOUR LIFE!

With a turnkey system for spotlights that comprises a LUGA module, holder, electrical cables, thermal pad and a selection of reflectors

Simply install in the luminaire, connect and switch on!

Based on a new holder system, we can now present the Easy 28 system: a holder fitted with a high-quality LUGA module, ready-wired for easy connection, with a removable transparent protective cover over the light-emitting surface for trouble-free handling during shipping and installation, thermal interface pads on the back for optimum thermal dissipation and the option of attaching an aluminium reflector.

The following options are available:

- Various Panasonic LUGA COB modules (types DMS120, DMS12C and DMS18C; PCB: 28 x 28 mm) with a service life of more than 80,000 hours at 700 mA and a minimal decrease in luminous flux of L90/B10
- Either 4,000 K or 5,000 K CRI 85 (other colour temperatures and CRIs on request)
- Two aluminium reflectors (Ø 75 x H 43.55 mm and Ø 90 x H 53.55 mm), each with four different distribution characteristics (16° to 60°)
- Two different mounting distances:
 - 57 mm: this distance between the live parts and the metal parts was increased with the aim of ensuring compliance with the requisite value for luminaires of protection class II and ensure protection up to 10 kV and to switch the modules in series.
 - 35 mm: to comply with the ZHAGA standard.
- Two versions of the thermal pads:
 - open surface behind the PCB to enable the use of thermal paste
 - fully enclosed for easier mounting

This innovative system is not only perfect for high bay or high mast lighting but also a popular choice for high-performance applications in retail lighting.

During the course of the year, the Easy family is set grow with further variants offering lumen packages of 1,000 to 5,000 lm.

Simply call us and ask for your sample now. VS always has a solution in store.
