ATTENTION: No password needed!

On-site Installation for stand-alone operation

Step 1:
This system is now preconfigured as a stand-alone DHCP-Server. The port Ethernet port must be directly connected to the Light Controller IP by ethernet (RJ45 cable). Please carefully read the quick-start-guide for Light Controller IP for further information.

Configuration & Control option 1:
• Connect a HDMI/VGA display plus keyboard & mouse and go to website http://127.0.0.1

Configuration & Control option 2 (requires successful set-up of step 1 above):
• Connect your mobile WiFi device (iOS/Android) according to the manual enclosed

Configuration & Control option 3:
• Connect a laptop (setting: DHCP auto, no proxy) to the Light Controller via ethernet
• Go to website http://192.168.137.1

Configuration & Control option 4:
• Use an accesspoint, ensure that it has no DHCP server enabled and assign it the static IP-address 192.168.137.2
• Connect to a mobile device (with the WiFi-Key of your accesspoint)
• Go to website http://192.168.137.1

LightBox

D-Link Extender (DHCP Server) — Tablet

Light Controller 1

Light Controller n

Optional: Access Point (No DHCP Server, static IP 192.168.137.1) — Tablet

Optional: PC/Notebook (as DHCP Client)

Step 2:
Go to VS Lighting Browser
